WIRELESS INTERNET EXPANSION ANNOUNCED

The KDSI Wireless Team has been busy expanding our High Speed Wireless network. We have 2 new towers in Grand Island, a new location in Wood River and have added a second antenna on the Doniphan tower.

Each of these systems can reach a range of 5-8 miles depending on the signal conditions. Our Wood River location however, has a greater range. According to our Wireless Technician, Rafael Quawrells, "We have seen exciting results with the new location in Wood River. This system is performing well for our customers in rural Central Nebraska."

The KDSI High Speed Wireless is a fixed wireless service. That means you must have a clear line-of-site to our tower to get the best possible signal strength and speed. Each location requires a directional antenna. The data received by the antenna then runs through a wired network to an external radio device inside the home.

High Speed wireless is also available in Hastings, Loup City, Broken Bow, and Kearney, Nebraska and Oskaloosa and Pella, Iowa.

FOR THE HOLIDAYS!

Give the gift of yourself and your time. There are countless ways you can do it, and you'll be amazed at what you get back. Here are some ideas:

- **Offer** to join someone on a daily walk or some other type of physical activity.
- **Make** a commitment to visit a housebound person at least once a month.
- **Volunteer** to coach kids' sports or work as a teacher's aid.
- **Walk** dogs at an animal shelter.
- **Make** a point to have at least one conversation with your kids every day that isn't about their appearance, schoolwork, or chores that need to be done.
